

How to set-up your Seesat 6000 for the first time.

First off you should create a folder on your desktop named Seesat 6000.

Next download file and save to Seesat folder.

You will now need to unzip the file, if you don't have winzip you can locate it at www.winzip.com(free)

Now that you have the file unzipped you need to copy it to your usb drive. You can either right click on the file and hit copy, than move to usb drive and paste. Or drag and drop it into your usb drive.

Now that we have the file on the usb drive lets turn on our Seesat.

We take it for granted that you have aligned you dish for the Satellites you want.

Turn the switch on the back of the unit to on then use remote to power up.

Next you will be prompted to select your language.

Once you have chosen your language press the OK button to save.

Place the USB stick in the slot in the back of the unit. The screen will come up saying the usb ready.

Next we need to upload the file. Use the right arrow and move 1 spot to the right.

At the bottom you see USB menu. Scroll down to that spot and press the OK button.

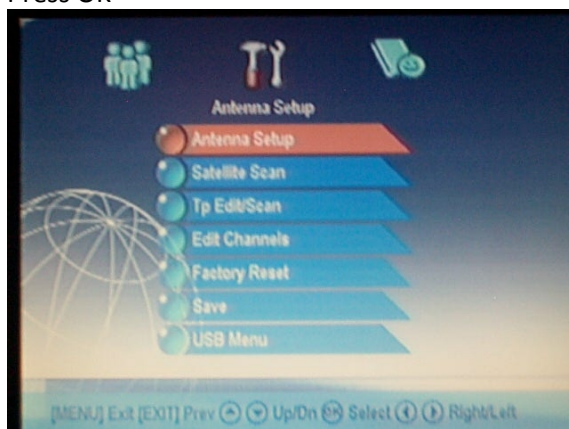

Your screen will then show the file on the USB stick. Highlight the file you want to upload if you have just one file then press the OK

At the end of the update it may ask if you want to reboot press OK for yes.

After the unit reboots our next task will be to set up the sats we want to watch.

Press menu and scroll over one spot again and on the top is Antenna Setup. Press OK

A list of satellites will appear. Scroll down to the one you want to setup.

For the purpose of these instructions we will pick Echo 6/8 (110wW)

Press Ok and a check mark will appear in the red circle.

Right arrow once then down to the diseque switch and change to your situation.

I have mine on LNB 2

When you are done press the OK button to save.

We have now set up Echo 6/8 and are ready to scan that sat.

To do other satellites left arrow back to the list of Satellites and pick another one

And do the same.

You do this for all of the satellites you want to receive.

Scanning the Satellites.

Press menu, right arrow over one, down to Satellite scan.

You will have to scan all the satellites that you want to watch.

On the bottom you see the sat that's going to be scanned. If the one you want is not there got down to the sat showing right arrow and the menu will show all sats pick the one you want then exit. Your sat will show at the bottom then press OK to start the scan.

After the scan is done the Seesat will return to the picture mode. Wait for the keys to roll then enjoy TV.

From here you should have to set the time for your location. It can be located on the first page when you press Menu.

See the first picture at the top.
